

KILT 10

After ten years, the Kilt gets a refreshed voice and reimagined aesthetic. An updated clipping section delivers more headroom, smoother attack, and a richer, more dynamically useful drive range than ever before.

CONTROLS

VOLUME - Controls the output volume. Left is less, right is more. More headroom means you no longer have to turn your volume up past noon and you have more ability to use as a boost.

GAIN - Controls the amount of drive or distortion. Left is less, right is more. Never before has the first 25% of the gain range been so usable. You will find transparent overdrive textures that were never before possible as well as the familiar and much loved gating fuzz abilities that the last 25% of the range offers.

TONE - Controls the amount of brightness. Left is darker, right is brighter. High-frequency control with enhanced clarity and improved amp compatibility.

G1 / G2 TOGGLES - These toggles work together to give you up to 4 different resistance clipping options. Both toggles down is the lowest gain setting. G1 up gives you more overdrive. G2 up gives you more fuzz. Both toggles up gives you the heaviest gated fuzz the Kilt offers! The G2 toggle can also be engaged by a Red Remote.

LOW-CUT TOGGLE - The down position is flat EQ, while the up position is the "cut" mode with less bass. In "cut" mode lows are reduced for an overall tone that cuts through the mix like never before.

JACKS

INPUT - Lower jack on the right side of the pedal.

OUTPUT - Jack on the left side of the pedal.

RED REMOTE - Upper jack on the right side of the pedal with a red washer.

THIS PEDAL MEASURES 2.6" X 4.8" X 1.6" AND CONSUMES 64mA. DO NOT USE MORE THAN 9VDC. DAMAGE MAY OCCUR AND YOUR WARRANTY WILL BE VOIDED.
